Professional Summary

Computer Science undergraduate with strong fundamentals in Data Structures, Algorithms, OOP, DBMS, and SDLC. Two ongoing engineering internships building real-time AI/software systems in Python with cloud deployment on GCP. Strong debugging, requirement analysis, and communication skills, seeking a Software Engineer role at HCLTech.

Technical Skills

- **CS Fundamentals:** Data Structures & Algorithms, OOP, DBMS, Software Engineering, SDLC.
- **Languages:** Python (Advanced), Java, C, JavaScript.
- **Databases:** SQL, PostgreSQL, SQLite.
- **Cloud & DevOps:** Cloud Fundamentals, Git, GitHub, Linux.
- **Machine Learning:** Classification, Regression, Predictive Modeling, CatBoost, Random Forest, SVM, Logistic Regression.
- **Deep Learning & Speech AI:** Encoder-Decoder Architectures, Transformer Models, ASR, Speech-to-Speech Translation.
- **Web Development:** Flask, REST APIs, HTML5, CSS, JavaScript.
- **Core Competencies:** Debugging, Requirement Analysis, Problem Solving, Technical Documentation, Team Collaboration, Communication.

Work Experience

AI and Software Engineer Intern | Oscowl AI | May 2026 – September 2026

- Contribute to software development and coding for a real-time speech-processing product, owning the audio synthesis stage from requirement analysis to implementation.
- Collaborate with engineers to debug and refine audio processing workflows, improving output reliability.
- Author internal technical documentation to support cross-team knowledge sharing.

Summer Intern | Viswam AI | May 2026 – July 2026

- Lead data collection and preprocessing for a Telugu Automatic Speech Recognition (ASR) model, preparing audio-text training corpora.
- Guide multiple intern teams on project tasks, priorities, and delivery timelines.
- Streamline status updates between intern teams and project managers, improving delivery coordination.

Projects

Pulse Predict Agent | Hackathon Project | Dec 2025

- Developed an agentic AI system, deployed on Google Cloud Run, to help public hospitals predict OP/IP patient flow.
- Designed agents for staff allocation, medicine/oxygen shortage forecasting, and automated night-shift reporting.

TaskFlash – Student Time Management App | Personal Project | Jul – Oct 2025

- Architected a full-stack Flask web app suggesting real-time, 5-to-10-minute micro-tasks to students.
- Built a responsive HTML/CSS/JavaScript front end with backend estimation algorithms for progress tracking.

Heart Failure Prediction using CatBoost | Personal Project | May – Jun 2025

- Engineered a classification model in Python benchmarking CatBoost against Logistic Regression, SVM, and Random Forest.
- Achieved 94% accuracy and a 0.92 F1-score, a 7% improvement over Random Forest.

Education

B.Tech, Computer Science and Engineering | RGM College of Engineering and Technology | Expected Jul 2027 CGPA: 8.25 / 10 (Current)

Pre-University Course | IIIT Srikakulam | Graduated 2023 CGPA: 8.8 / 10

Certifications

- Automation Associate Developer – UIPath | Data Analyst Associate – DataCamp
- Associate Database Administrator – MongoDB | Cybersecurity Fundamentals – IBM

Hackathons and Achievements

- Participated in the GDG Hyderabad Agentathon, a Guinness World Record setting event for most participants in a single hackathon, gaining hands-on exposure to large-scale collaborative AI development.
